DICOM Correction Item

Correction Number CP-	643	
Log Summary: Add veterinary identification tags		
Type of Modification	Name of Standard	
Addition	PS 3.3, 3.5, 3.6, 3.16 2006	

Rationale for Correction

Veterinary applications require additional identifying attributes that define the owner as well as characteristics of the species and breed.

These are added to all existing and future composite image and non-image IODs by specifying their inclusion in the General Patient and Patient Study modules.

The attributes are required to be present if the subject is not a human (forcing their support by veterinary products, without interfering with the installed base of human products), but some may be empty (zero length) if unknown (e.g. the species or breed is unknown).

The Patient Neutered value is added to the Patient Study Module, which may have different values for different studies, whereas values in the General Patient Module remain fixed for the life of the patient.

The concept of other patient identifiers than the primary Patient ID attribute is generalized by the introduction of a sequence to encode other identifiers, each with a specified issuer and type, in order to encode anatomically-embedded identifiers like RFID chips.

Additionally, an alternate understanding of the structure of the Patient Name is necessary in a veterinary context (where the patient does not have a "family name" but instead uses that of the owner).

Corresponding attributes are also added to Modality Worklist as optional attributes in the information model.

The Subject Context template in PS 3.16 is also updated.

PN Person Name	A character string encoded using a 5 component convention. The character code 5CH (the BACKSLASH "\" in ISO-IR 6) shall not be present, as it is used as the delimiter between values in multiple valued data elements. The string may be padded with trailing spaces. For human use, tThe five components in their order of occurrence are: family name complex, given name complex, middle name, name prefix, name suffix. Any of the five components may be an empty string. The component delimiter shall be the caret "^"	Default Character Repertoire and/or as defined by (0008,0005) excluding Control Characters LF, FF, and CR but allowing Control Character ESC.	64 chars maximum per component group (see NOTE in 6.2)

> character (5EH). Delimiters are required for interior null components. Trailing null components and their delimiters may be omitted. Multiple entries are permitted in each component and are encoded as natural text strings, in the format preferred by the named person. This conforms to the ANSI HISPP MSDS Person Name common data type.

> For veterinary use, the first two of the five components in their order of occurrence are: responsible party family name or responsible organization name, patient name. The remaining components are not used and shall not be present.

This group of five components is referred to as a Person Name component group.

For the purpose of writing names in ideographic characters and in phonetic characters, up to 3 groups of components (see Annex H examples 1 and 2) may be used. The delimiter for component groups shall be the equals character "=" (3DH). The three component groups of components in their order of occurrence are: a single-byte character representation, an ideographic representation, and a phonetic representation.

Any component group may be absent. including the first component group. In this case, the person name may start with one or more "=" delimiters. Delimiters are required for interior null component groups. Trailing null component groups and their delimiters may be omitted.

Precise semantics are defined for each component group. See section 6.2.1.

Examples:

Rev. John Robert Quincy Adams, B.A. M.Div.

"Adams^John Robert Quincy^^Rev.^B.A. M.Div."

[One family name; three given names; no middle name; one prefix; two suffixes.]

Susan Morrison-Jones, Ph.D., Chief

Executive Officer

"Morrison-Jones^Susan^^^Ph.D., Chief Executive Officer"

[Two family names; one given name; no middle name; no prefix; two suffixes.]

John Doe

"Doe^John"

[One family name; one given name; no middle name, prefix, or suffix. Delimiters

	have been omitted for the three trailing null components.] (for examples of the encoding of Person Names using multi-byte character sets see Annex H) Smith^Fluffy [A cat, rather than a human, whose responsible party family name is Smith, and whose own name is Fluffy] ABC Farms^Running on Water [A horse whose responsible organization is named ABC Farms, and whose name is "Running On	
Notes:	Water"]1. This five component convention is also used by HL7 as defined in ASTM E-1238-91 and further specialized by the ANSI MSDS.	
	2. In typical American and European usage the first occurrence of "given name" would represent the "first name". The second and subsequent occurrences of the "given name" would typically be treated as a middle name(s). The "middle name" component is retained for the purpose of backward compatibility with existing standards.	
	3. The "Degree" component present in ASTM E-1238-91 is absorbed into the "Suffix" component.	
	4. The implementor should remain mindful of earlier usage forms which represented "given names" as "first" and "middle" and that translations to and from this previous typical usage may be required.	
	5. For reasons of backward compatibility with versions of this standard prior to V3.0, person names might be considered a single family name complex (single component without "^" delimiters).
